

ICOADS the Global Marine Surface Reference Dataset

Steven J. Worley (NCAR)
Scott D. Woodruff (NOAA/NCDC & CIRES)
J. Eric Freeman (NOAA/NCDC & STG Inc.)
Shawn R. Smith (COAPS/FSU)
USA

The National Center for Atmospheric Research is operated by the University Corporation for Atmospheric Research under sponsorship of the National Science Foundation

Topic Outline

International Comprehensive Ocean- Atmosphere Data Set (ICOADS)

- Status, Current and future Releases
- ICOADS Value Added Database (IVAD)
- Data Access

Current Release, 2.5, 1662-2013

- Delayed Mode Processed Data, **1662-2007**
 - 50 + historical data sources
- Near Real-time Processed Data, **2008 – Now**
 - Based on NOAA NCEP GTS
- Metadata on each record
 - Source Identification
 - Platform / instrument type
 - VOS characteristics from WMO, 1966-2007

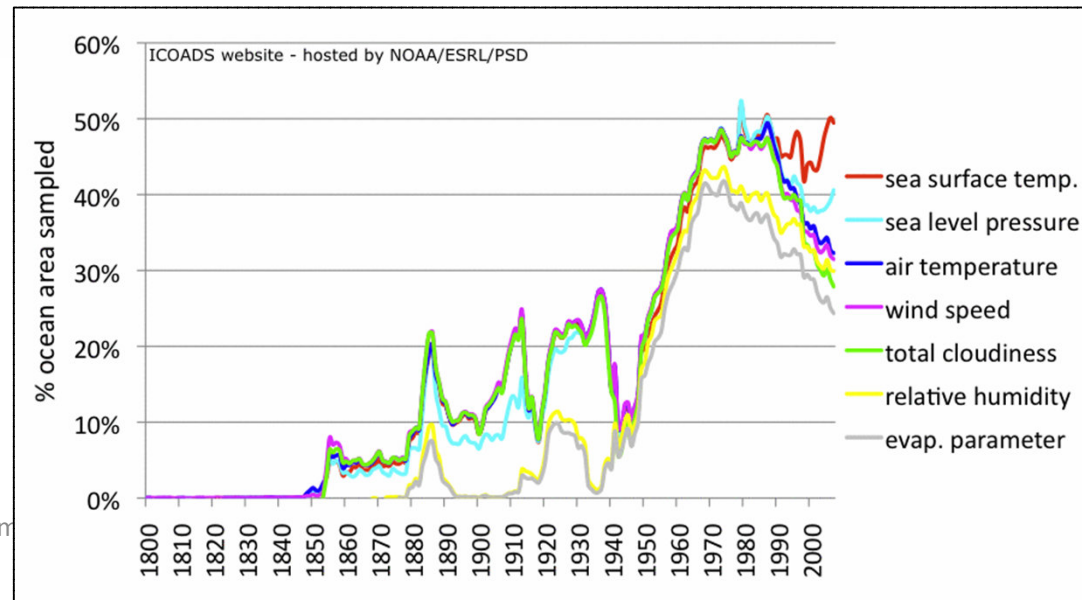

R2.5 Basic Characteristics

Evolution platform mixture (1937-2007)

% Ocean Coverage by Variable

Release 3.0, in development

- Completion target date: **late 2014**
- Collaborations w/ international partners
 - National Oceanography Centre, UK
 - Met Office, UK
 - CRU, University of East Anglia, UK
 - Deutscher Wetterdienst (DWD), Germany
 - Center for Earth Systems Research and Sustainability, U. Hamburg, Germany
 - Atmospheric Circulation Reconstructions over the Earth (ACRE), Global Participants

Release 3.0

Important archive format expansions

Permanent unique identifier (UID) on each record

- Provides absolute record tracking mechanism
- Enables inclusion of feedback from re-analyses
- Makes user interactions (consulting) easier
- Simplifies data contributions from partners

Release 3.0

Important archive format expansions

Near-surface ocean attachment (*Nocn*)

- Depth referenced data
 - Salinity, Temperature, Nutrients, pCO₂, DIC etc.
- World Ocean Database 2013
- Possible other TSG surface data:
 - SAMOS, GOSUD, R2R, etc.

R3.0, Historical Additions

- Extended WWI Royal Navy Ship's Logs: 1914-23
- Data digitized under ACRE/OldWeather: ~1700-1946
- US Lightship Collections: 1916-1982
- German Maury Collection: 1845-67
- English East India Co.: 1789-1834

R3.0, Data Replacements / Improvements

- World Ocean Database 2013
- Merge two NOAA GTS feeds, NCEP + NCDC
 - Recover masked (deleted) ship IDs
- ISDM/Canada global drifting (moored) buoy archive
- ? Tropical moored buoy arrays: (PMEL, NDBC, JAMSTEC, etc.)
- ? NDBC near-coastal moored buoy/C-MAN

ICADS Value Added Database (IVAD)

A system to manage ICADS observations in parallel with expert developed adjusted data values.

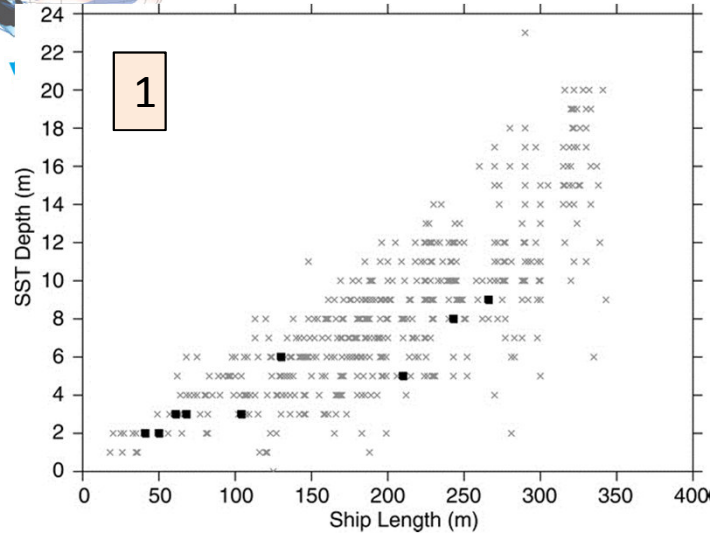

Major sources of inhomogeneity in ICADS

- Measurement differences between platforms
- Changes in observing systems over time
- Biases created by specific platforms
- Biases created by methods and coding practices
- Undetected systematic location errors

Ship AT heating bias relative to research buoy

Ship SST Challenges

1. SST sample depth versus ship length, engine intake and hull for 1997 data
2. Methods: Hull Sensor, Engine Intake, Bucket for 1970-1997
3. Coding resolution, whole degrees, July 1995 10 degree box.

Kent, E. C. and P. K. Taylor, 2006: Towards estimating climatic trends in SST. Part 1: methods of measurement. *J. Atmos. Oceanic Technol.*, **23**(3), 464-475

IVAD; the technical pieces

- Design a data format attachment (*Ivad*), that is optional for every ICOADS record.
 - Allow for multiple *Ivad* attm. per record
- Manage all records, ~ 300M, in relational DB
 - UID on each record is key
- Major candidates for *Ivad*
 - Estimates of observational bias
 - Adjustments to standard measurement height/depth
 - Improved QC flag or measure method definition

IVAD; the technical pieces

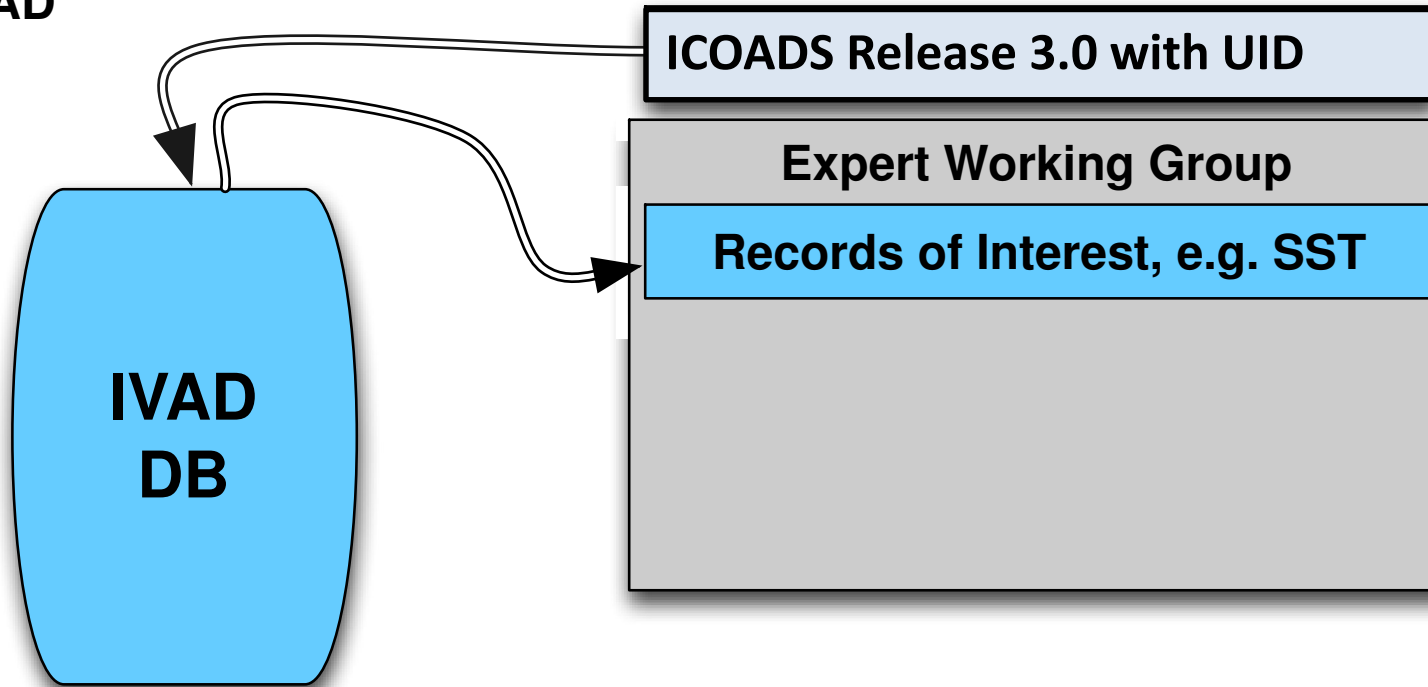

- Features of the *Ivad* process
 - Prepared and submitted by expert community
 - **Contains the adjusted data value**
 - Several data uncertainty values (optional)
 - Author reference code – pointer to method documentation

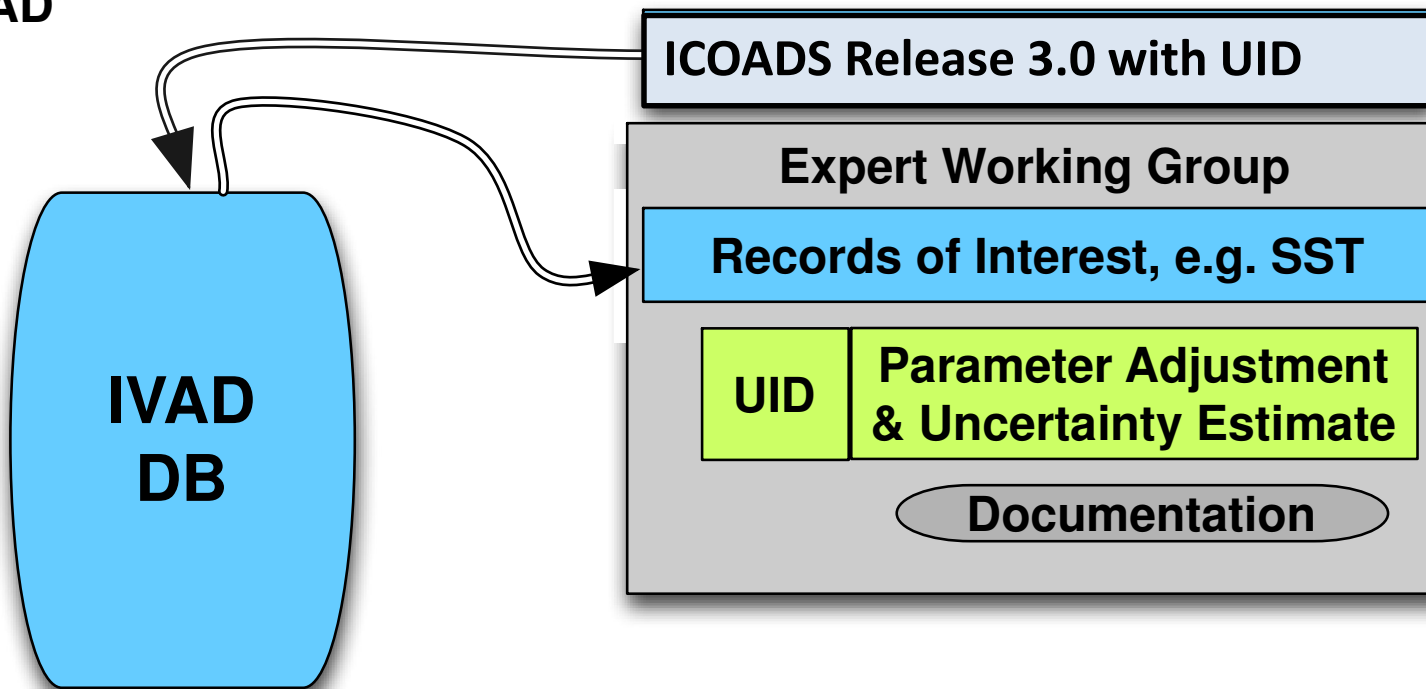

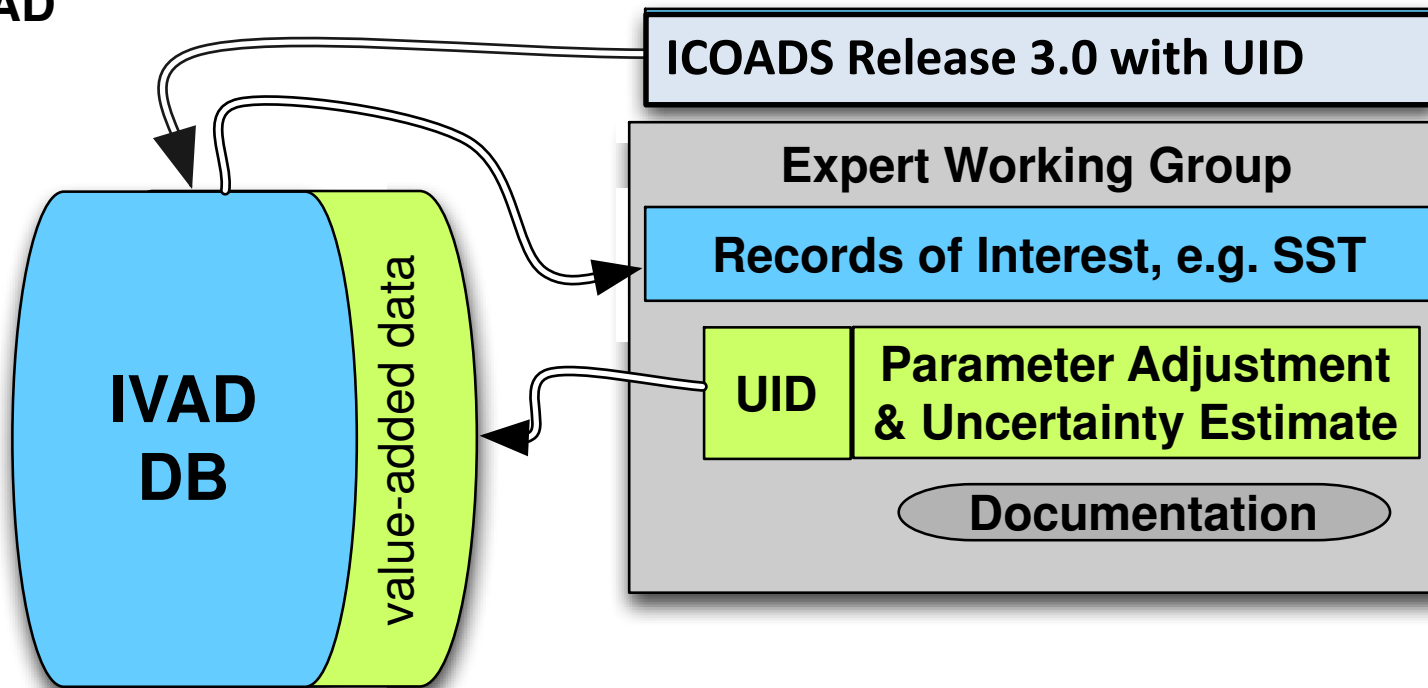

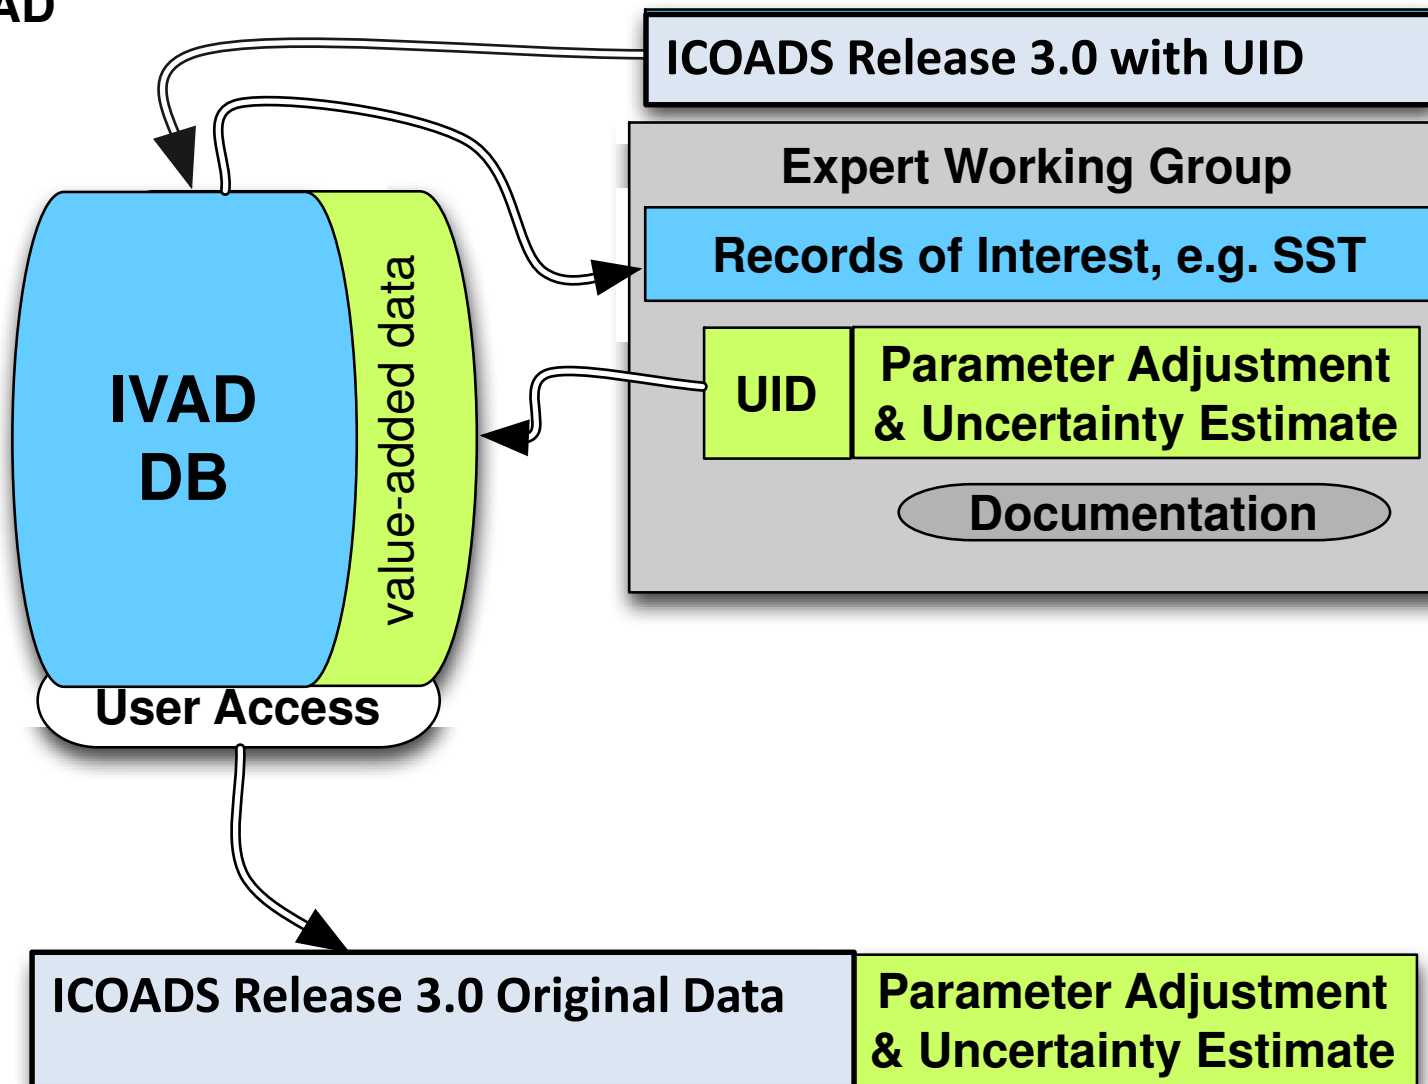

ICOADS Release 3.0 with UID

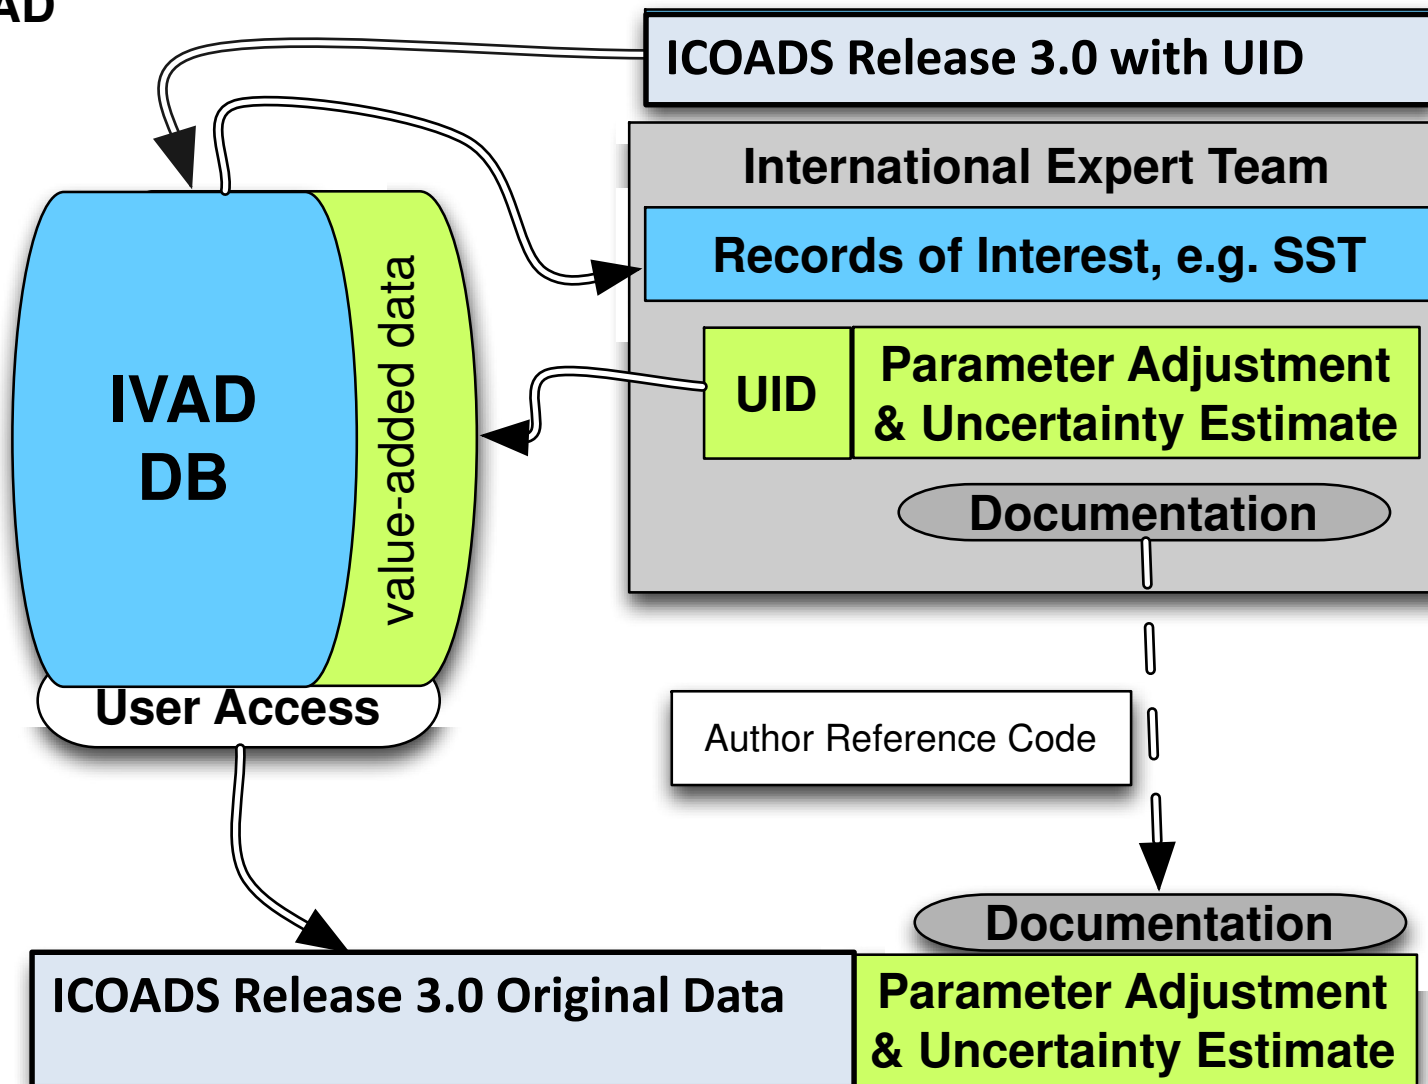

Users have access to expert developed bias adjustments. More homogenous data.

ICOADS Products and Access

Partner Org.	Monthly Statistics 1°x1° (1960 →) 2°x2° (1800 →)	Observations (1662 →)
NCAR	<ol style="list-style-type: none"> Binary Files GUI subsetting (t,x,y,var,σ) ASCII 	<ol style="list-style-type: none"> ASCII Files GUI subsetting (t,x,y,var,σ) ASCII
NOAA/PSD	<ol style="list-style-type: none"> NetCDF Files Software 	<ol style="list-style-type: none"> Software
NOAA/NCDC	<ol style="list-style-type: none"> Archive Backup 	<ol style="list-style-type: none"> ASCII Files

- Very basic and reliable access for a diverse user community
- Desires for more standard and interoperable access
 - Re-design + make monthly statistics netCDF CF compliant
 - Publish monthly statistics in THREDDS catalog and service
 - Drive observation subsetting with IVAD DB and add netCDF output option.

Conclusions

- Working hard to prepare Release 3.0, 2014
 - Significant support from International partners
- IVAD is in testing phase
 - Adjusted data – more homogeneous, well documented
- Hope to achieve more standard and interoperable access

Example of ship heterogeneity

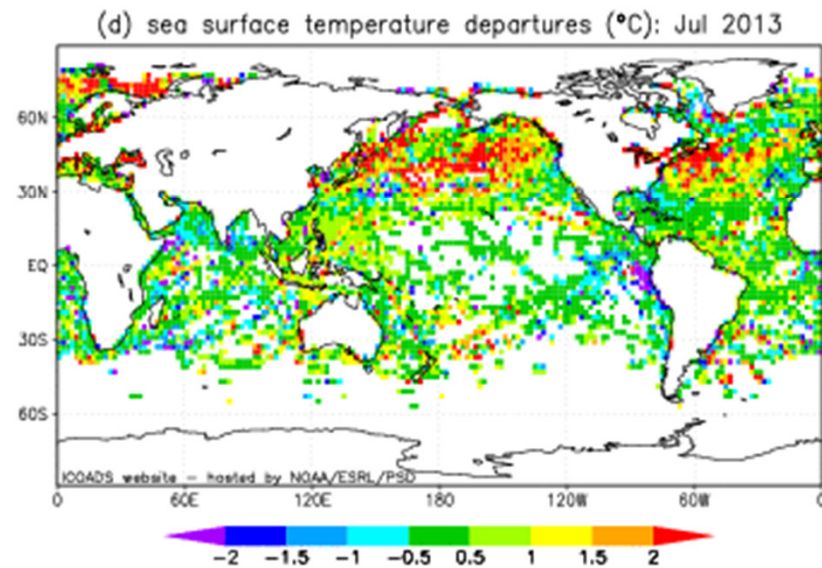

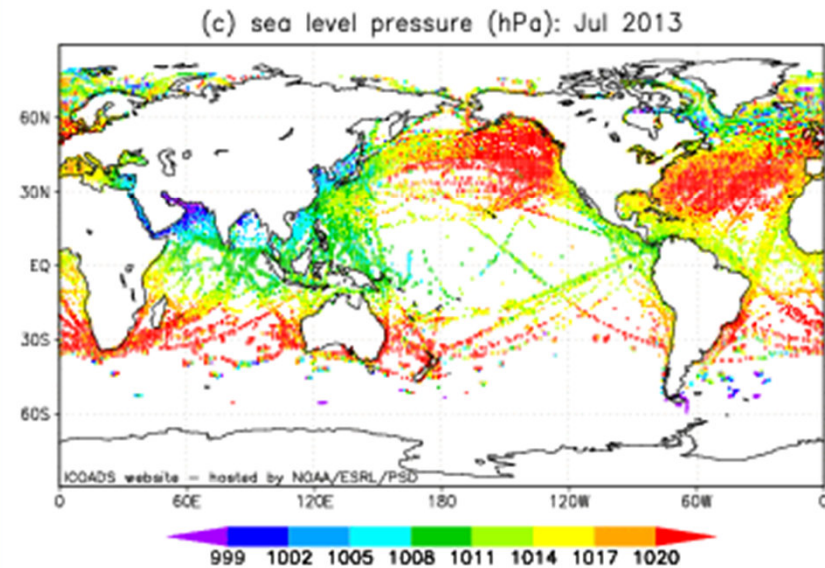

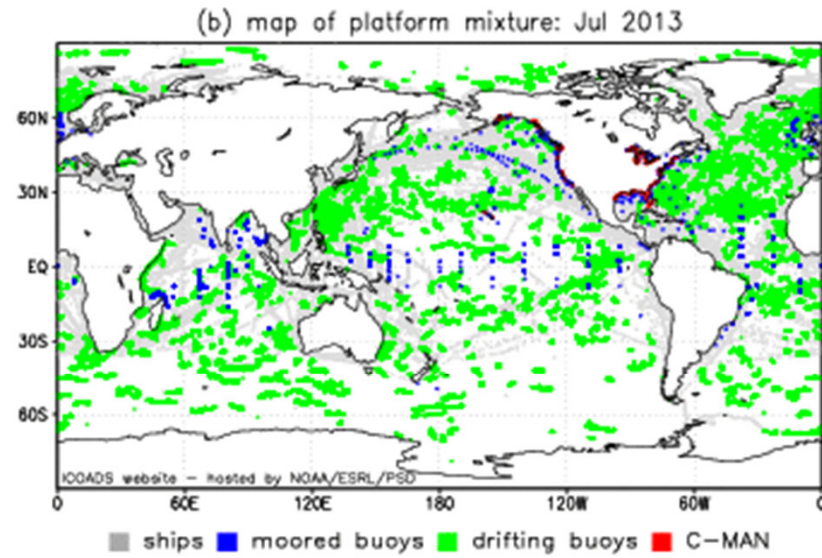

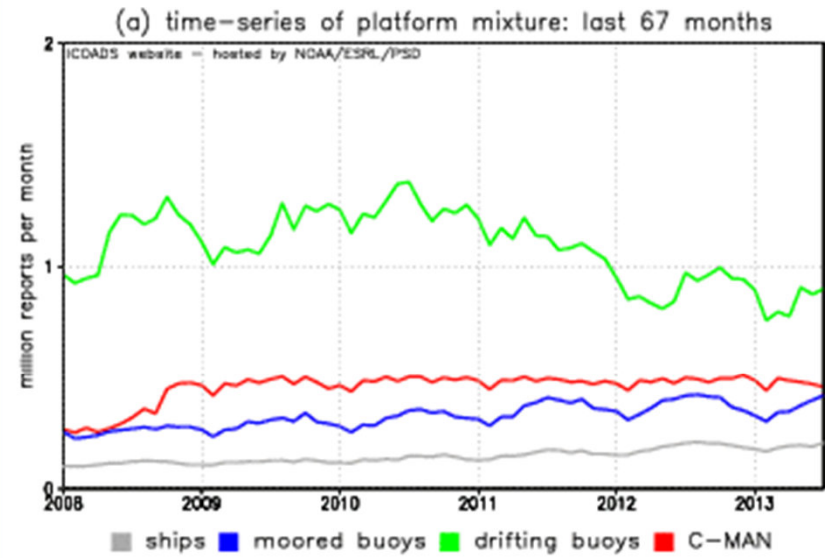

Measurement height versus
ship length (1980-2002)

Kent, E.C., S.D. Woodruff and D.I. Berry, 2007: WMO Publication No. 47 metadata and an assessment of observation heights in ICOADS. *J. Atmos. Oceanic Technol.*, **24**, 214-234 ([doi:10.1175/JTECH1949.1](https://doi.org/10.1175/JTECH1949.1))

Monitoring

SST Sample buckets

R2.5 Basic Characteristics

1. Surface marine observations
2. Basic gridded monthly products

Platform Mixture

Variables

R2.5 Basic Characteristics

Evolution platform mixture (1937-2007)
